-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. Applicant's election without traverse of Group I in the reply filed on 9/7/04 is acknowledged.
2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-20 rejected under 35 U.S.C. 103(a) as being unpatentable over Goodnight, Jr. et al (U.S. Patent No. 4091,120) taken together with Malzahn.

Goodnight, Jr. et al discloses a soy protein material made through the preparation of a soybean slurry from soy flour wherein the concentration of soybean is as called for in the claims and wherein the pH of the slurry is adjusted as set forth in the instant claims and the resulting slurry is passed through an ultra filtration membrane, inherently polymeric, having a cutoff and employing the processing temperature as claimed . The soy protein created therein is inherently deflavored taking into account the similarity in processing between the instant invention and that of Goodnight, Jr. et al (see cols. 2-4; examples).

The claims further call for a dough product containing said soy protein material. It is well known to employ soy protein in dough products. For example, Malzahn teaches the addition of soy protein in cereal dough. As such, it would have been obvious to one having ordinary skill in the art at the time of the invention to have employed said soy protein in a dough material as an art recognized use for soy protein.

As for the amount of soy protein employed in the dough product, determination of same would have been well within the purview of a skilled artisan, and, absent a showing of unexpected results, it would have been further obvious to have arrived at same as a matter of preference depending on the particular flavor desired in the instant product, the amount of fill needed, etc.
